

Cloud remastered for AI

CASE STUDY: jinIX

AI Innovation with Speed and Confidence, with Volo

JinIX is a global healthcare ecosystem improving rare disease care through blockchain and AI. Using **Volo's automated Cloud Foundations and AI-ready modules on Azure and AWS**, they quickly compared GenAI models, made informed architectural decisions, and tested at scale — all with built-in governance, cost control, and security.

The Challenge

Comparing GenAI approaches, across Cloud Providers with control and speed.

JinIX sought a secure, scalable, and automated infrastructure to test and deploy GenAI models across various cloud platforms. Their aim was to evaluate AI practices while ensuring compliance, cost control, and operational agility. As a global ecosystem for rare disease innovation, they needed a foundation for fast iteration, embedded governance, and future-proof flexibility.

The Volo Solution

B2B SaaS for automated, secure Cloud Foundations and AI infrastructure.

Volo provided JinIX with an automated, multi-Cloud Foundations (Landing zone plus Shared Services) SaaS and AI application infrastructure, as a consulting engagement, to test, compare, and evolve GenAI models — quickly and securely. With embedded cost controls, governance, and AI-ready infrastructure, JinIX accelerated insight, reduced overhead, and scaled confidently while making data-driven decisions.

The Results

Secure GenAI experimentation with real-time governance and multi-cloud choice.

Volo Cloud Foundations and AI application infrastructure enabled JinIX to efficiently evaluate GenAI models on AWS and Azure, automate infrastructure, and make informed decisions while ensuring cost, security, and innovation.

Faster Time to Market

JinIX was able to expedite strategic decision-making and product launch.

Focus on Innovation and Growth

JinIX was able to free up resources, and focus on innovation and differentiating value.

Future-proof foundations

JinIX has scalable Cloud foundations that are both future-proof and free from technical debt.

Automated Governance & Control

Volo automation has streamlined governance, security, and compliance.
